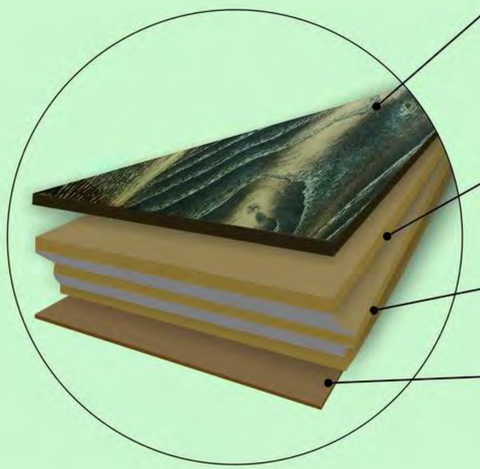
Customization

For giving a more aesthetic and authentic look to the resilient flooring, we import advanced printing line from Korea, that guarantees the natural feeling and hygiene of the surface, and can develop new pattern and print any color in accordance to clients' requirement, either the wood grain or stone. We always try our best to help our clients to express their specialty and individuality of the products, making their companies more competitive in markets.

ENGINEERED

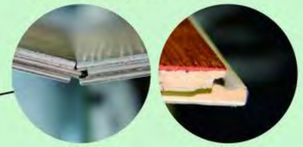
Engineered flooring is also the core competence for Kentier. A rich color palette that combines stunning original visuals with a modern feel. This allows you to choose your Own style with nature's embrace.

GE1516



Hardwood Top Layer
This layer is made of solid wood and gives you the look and feel of a real solid wood floor, This top layer has a finish which can range between oil or lacqueer

Softwood
The core area helps the flooring retain its shape and stability.A variety of materials such as plywood,softwood can be used for the mid core section.



T&G Click

Supporting Layer
This layer is key to providing stability to the board,giving a strong foundation for the flooring
